Every day in schools across the country students are learning and mastering math using the MathTutor software series for Grades 6-12 math. The series is also helping students in college and community learning centers to build proficiency in math, and to gain the confidence so necessary for math success in the classroom and beyond. Educators across the country have praised the company's award-winning algebra tutorial software program and the 13 other titles that comprise the MathTutor series.

"The MathTutor series is remarkable effective in helping students develop problem solving skills," says Dr. Alan Saleski of the Mathematics Dept. at Loyola University Chicago. "The use of graphics and animation is compelling, and helps students gain a deeper understanding of the concepts of math."

The MathTutor software series is a proven, curriculum-based family of software titles for Grades 6-12 math that is designed for students at all levels of ability. The series features highly interactive tutorials that use animation and graphics to enrich the learning experience. The series allows students to work at their own pace, building skills and confidence one step at a time.

Curtis D. Blaine, Vice President of Development, said, "The MathTutor software series has consistently been selected by schools and districts that have carefully evaluated the offerings of different companies in search of the best available curriculum-based math software."

Release 5.0 of the MathTutor series, released in August, introduced key enhancements to the series, including an expanded emphasis on real world scenarios and the use of math in everyday life within the software's tutorials and problem solving exercises. Also, schools that purchase a site license may provide free copies of the MathTutor software for students to install on their home computers.

**About MathTutor Educational Software (www.mathtutor.com):**
MathTutor Educational Software, Inc. is a leading publisher of self-study tutorial software for Grades 6-12 math.
