## 7 Key Benefits of Using a Password Manager

Weak passwords continue to be the greatest security risk to individuals and organizations. A password manager like Last Pass makes it easy to generate strong, unique passwords for every service you use. It helps protect your Loyola-related services, as well as your personal services.

A password manager simplifies your life by saving your passwords in a secure vault you can access from any device, using a single, strong master password. You no longer have to remember unique passwords for every site you visit. A password manager remembers them for you.

### 7 Key Benefits

#### Never forget a password

Store all your important passwords in a secure, searchable vault.

#### Simplify logging in

Password Manager fills in login fields for you—no typing required.

#### Create stronger passwords

Password Manager detects when you are creating or changing a password and can generate a strong, complex password for you.

#### Take it with you

You can use Password Manager at home, at work, or on the go with the mobile app.

#### Streamline transactions

When you're ready to make a purchase online, your profile will fill all your payment and shipping details for you

#### Protect important information

Password Manager can also keep your insurance cards, memberships, Wi-Fi passwords, and other notes safe and easy to find.

#### Share securely

Conveniently and safely share passwords and notes.

### LastPass Instructions

For instructions on how to use LastPass, please visit the following website with a step by step walkthrough: [LastPass How-To Guide](#).

### Free LastPass for Your Family!

In addition, please note that with Loyola's LastPass, users have five personal licenses to share with their family members. The best part? All of this is redeemable straight from the user's [LastPass vault](#). Better security at home means better security in the workplace.
